

January 21, 2012

Agenda for the day:

- 9:00 – 9:50      Optimizing neonatal foal health: looking ahead for trouble and planning early intervention
- 9:50 - 10:05      Break
- 10:05 – 10:55      Sick neonates in the field – Part 1 Resuscitation, sensible drug choices
- 10:55 – 11:10      Break
- 11:10 – 12:00      Sick neonates in the field – Practice tips for fluid therapy, nutrition, diagnostic procedures, and intensive care
- 12:00 – 1:30      Lunch
- 1:30 – 2:30      Infectious respiratory disease: Likely pathogens, best diagnostic samples, and diminishing the risk of transmission
- 2:30 – 2:45      Lyme Disease in Horses – A Discussion
- 2:45 – 3:00      Equitarian Initiative & Castration Clinics

The discussion on Lyme disease is added due to two recent reports of neuroborreliosis, confirming Dr. Burgess' long ago case report of CNS involvement, and diagnosed with the new multiplex test from Cornell.

A diagnosis and treatment consensus might not be reached but it may be useful for all to hear about the papers and learn how different practices are covering testing, vaccination and what if any response to treatment is obtained if Lyme disease is suspected or confirmed.
